

Testing of the Blackjack game

Test 1: Bet function

Input: a sum of 20 is entered into the bet amount box and the bet button is clicked.

Intended output: The amount in the wallet label should drop to 80 and the amount in the pot label should display 40. One card should be displayed in the dealer's hand text box and two cards should be displayed in the player's hand text box. The total hand amounts should match the cards displayed.

Actual output: All intended outputs are satisfied.

Test 2: Stand function

Input: The Stand button is clicked.

Intended output: The dealer's hand should be dealt and the winner calculated. A message telling the player of the results should also be displayed.

Actual output: All intended outputs are satisfied.
